Field strength meter for the HDTV era

wbLNB COMPATIBLE

Spectrum analyser from 5 to 2500 MHz
Satellite band from 250 to 2350 MHz

Wideband LNBs deliver the entire Vertical and Horizontal satellite polarities (low and high band together) using two separate RF cables and an extended IF frequency range from 290 to 2,340 MHz. **Is your analyser prepared?**

DCSS LNBS

Digital Channel Stacking Switch satellite LNB

Digital Channel Stacking Switch LNB can support several users on a single cable distribution system by allocating specific user bands for each of them. It is not possible to work with this type of LNB unless your field strength meter can communicate using EN50494 and EN50607 standard protocols.

This is the case of **RANGER Neo 3** which also covers JESS and SATCR.

Be ready for the future

2.4 GHz WiFi ANALYSER

Improve your network performance

Your analyser for the new world

2.4 GHz WiFi ANALYSER Improve your network performance

Simultaneous real spectrum analyser information + WiFi access point data

WiFi signals can be disturbed by interference from other WIFI stations, for example other access points, but also from non-WIFI signals such as wireless CCTV cameras or, like in the picture, a microwave oven! **RANGER Neo 3** can display both simultaneously.

RANGER Neo 3 shows convenient information from the access points such as SSID, RSSI, SNR, security information, etc. It also indicates the number of access points per channel.

T2-MI PACKET ANALYSIS

RANGER Neo

Receiving and analysing T2-MI signals

T2-MI is the modulator interface signal used in the second generation digital terrestrial television broadcasting system. It is used in the connection between the "T2 Gateway" and the "DVB-T2 transmitter", both parts of the TV transmitter network normally placed in different locations. The T2-MI signal is physically transported to the TV towers, where the modulators are located, using IP or RF transport means. It is accessible via different network devices, switches, routers, microwave or satellite receivers in the form of ASI or IP signals.

RANGER Neo 3 can receive a T2-MI signal in both these formats, performing IP transport quality measurements, T2-MI packet analysis and PLP de-encapsulation.

NETWORK DELAY MARGIN

NETWORK DELAY MARGIN

All transmitters in a SFN (Single Frequency Network) network must be synchronised. It is the responsibility of the modulators in the transmitters to ensure that every bit from the transport stream goes on air at exactly the same time. Because transport stream is sent to different transmitter locations, normally via satellite or IP links, it will arrive to every destination with a different time delay. This delay is called the 'network delay'.

Network planners determine what time instant all transmitters should use to broadcast those transport stream bits. They all have to do it at a precise given time, i.e 700 ms in the picture. The difference between the network delay and the required transmission time (700 ms in the example) is called the 'network delay margin' and it will be different depending on the specific transmitter location. The lower the 'network delay margin' the higher the chances of that particular transmitter missing the assigned transmission time.

Fast and accurate spectrum analyser

PROFESSIONAL SPECTRUM ANALYSER

Reference traces

Freeze the spectrum graph and compare it with the running trace.

Triple split display

Say goodbye to switching between TV, measurements and spectrum modes.

Touch screen

Place the marker on any channel and move the trace using your finger.

MIN and MAX hold

Display them separately or simultaneously along with the current spectrum trace.

High resolution filters

Having the proper resolution filters is critical in some applications. *RANGER Neo 3* includes a very narrow 2 kHz filter.

Enjoy a wide variety of functions

EXTENDED IP FUNCTIONS the future of content delivering

Network bitrate

The network bitrate gives you an indication of the network load and possibility of overload.

Media Delivery Index

A key quality measurement formed by the Delay Factor and the Media Loss Rate.

PING, Trace, Average packet delay and IPDV

They are very useful to identify the reasons for communication problems, anything from complete service interruptions to uncontrolled delays which can be as important in terms of service performance.

IP Ethernet frame viewer

IP Ethernet frame viewer captures a multicast packet displaying all its frame details, for example Time-To-Live (TTL), all fields of RTP protocol, etc... It is very helpful to study IPTV signalisation problems.

Enjoy a wide variety of functions

ETHERNET CONNECTIVITY

remote control and web server

MORE INTERNAL MEMORY

up 7 GB for user data

Enjoy a wide variety of functions

MANY USEFUL FUNCTIONS

Simultaneous measurements

More computing power for real-time measurements displayed on a single screen.

Constellation diagram

Detect signal impairments at a glance. The more disperse the points are, the worse.

Dynamic echoes

A must-have utility for testing DVB-T, DVB-T2 and DVB-C2 networks.

LTE ingress test

Should you install an LTE filter? Test your TV distribution system.

Datalogger and Test&Go

Collect data for your reports faster and easier using the auto-setup Test&Go.

Attenuation test

Test the frequency response of your installation using RP-050, RP-080, RP-110B signal generators.

A new breed of analysers for a new world

TRANSPORT STREAM ANALYZER

Transport stream recording and analysis

Home network, commercial, point to point

Network delay margin

H.265

H.265 HEVC analyser and decoder

7GB

Fast-storage 7 GB capacity for user data

T2-MI de-encapsulation and analysis

Webserver control via Ethernet port

Common Interface slot for encrypted channels

Extended IPTV functions

DAB+

DAB and DAB+ digital radio

Digital Channel Stacking Switch LNB (dCSS)

5GHz

5 GHz RF input (optional)

Optional optical power meter and RF converter

GPS for signal coverage analysis

USB

2x USB ports

A NEW STANDARD IN FIELD STRENGTH METERS

TV, CABLE, SATELLITE & WIFI ANALYSER

SPECIFICATIONS	RANGER Neo 3		
DIGITAL STANDARDS	DVB-T, DVB-T2, DVB-T2 lite, DVB-T2-MI (Gateway to Modulator), TS DVB-C, DVB-C2 DVB-S, DVB-S2, DVB-S2 Multistream, DSS, ACM / VCM DAB, DAB+		
AUDIO CODECS	MPEG-1, MPEG-2, HE-AAC, Dolby Digital, Dolby Digital Plus
